

Igor Kombeev

Senior Frontend Engineer

👤 Profile

Frontend Engineer with over 5 years of experience in developing modern front-end applications using TypeScript, React, and state management libraries (Effector/Redux). Proficient in building scalable and maintainable systems, optimizing performance, and implementing best practices for maintainable and efficient code bases. Experienced in team leadership, including onboarding, conducting code reviews, and establishing development workflows. Skilled in collaborating with cross-functional teams and delivering high-quality products on time. Always eager to take new challenges and bring technical excellence to your project.

💼 Employment History

Senior Front-end Software Engineer at EPAM Systems, Krakow

February 2021 — Present

Initiated the UI migrating project from scratch, setting up the development environment, configuring code linting, establishing efficient build (**Webpack**, **Vite**) and testing pipelines (**Jest**);

Created main nodes of the system: module structure, state management, routing, localization and more;

Contributed to the development of multiple key features with **TypeScript**, **React**, **Effector** and **MUI**, ensuring high performance and scalability;

Supported team growth by conducting interviews, onboarding new team members. The maximum size of the frontend team was 7 members over 5 months;

Streamlined development processes by organizing code reviews and implementing effective task estimation practices, improving code quality and delivery predictability;

Actively participated in the planning, collaborating with the client-side manager from Germany to align priorities and distribute tasks among frontend developers;

Engaged in cross-team meetings for the purpose of developing and maintaining shared libraries;

Successfully brought the project to production, ensuring its stability and meeting client expectations.

Front-end Software Engineer at EPAM Systems

October 2020 — February 2021

Improved the main page by implementing a “Recommendations” section with **React** and **TypeScript**. Optimized the entire page for mobile devices, ensuring a seamless and responsive experience across various screen sizes;

Developed a roles management page in the admin panel, simplifying user access control and improving administrative efficiency;

Played an active role in task planning and estimation, contributing to a more predictable and efficient project delivery process.

Front-end Software Engineer at Vigrom

July 2019 — October 2020

Developed 5 new gambling games by utilizing the existing engine and utilities, using **React** as the foundation for UI components, **Redux** for state management, and **Pixi.js** for rendering in Canvas;

Optimized core animation logic within the rendering engine, significantly reducing lags for users on older hardware, leading to a smoother gaming experience;

Actively contributed to team planning and task estimation, improving overall delivery efficiency.

Education

Bachelor, Penza State Technological University

September 2015 — June 2019
